WOODEN FLOOR STRUCTURE

Natural wood:

- no allergies;
- durability and longevity;
- pleasant and warm;
- easy to install;
- regulates the microclimate.

Strongest constructions on the market

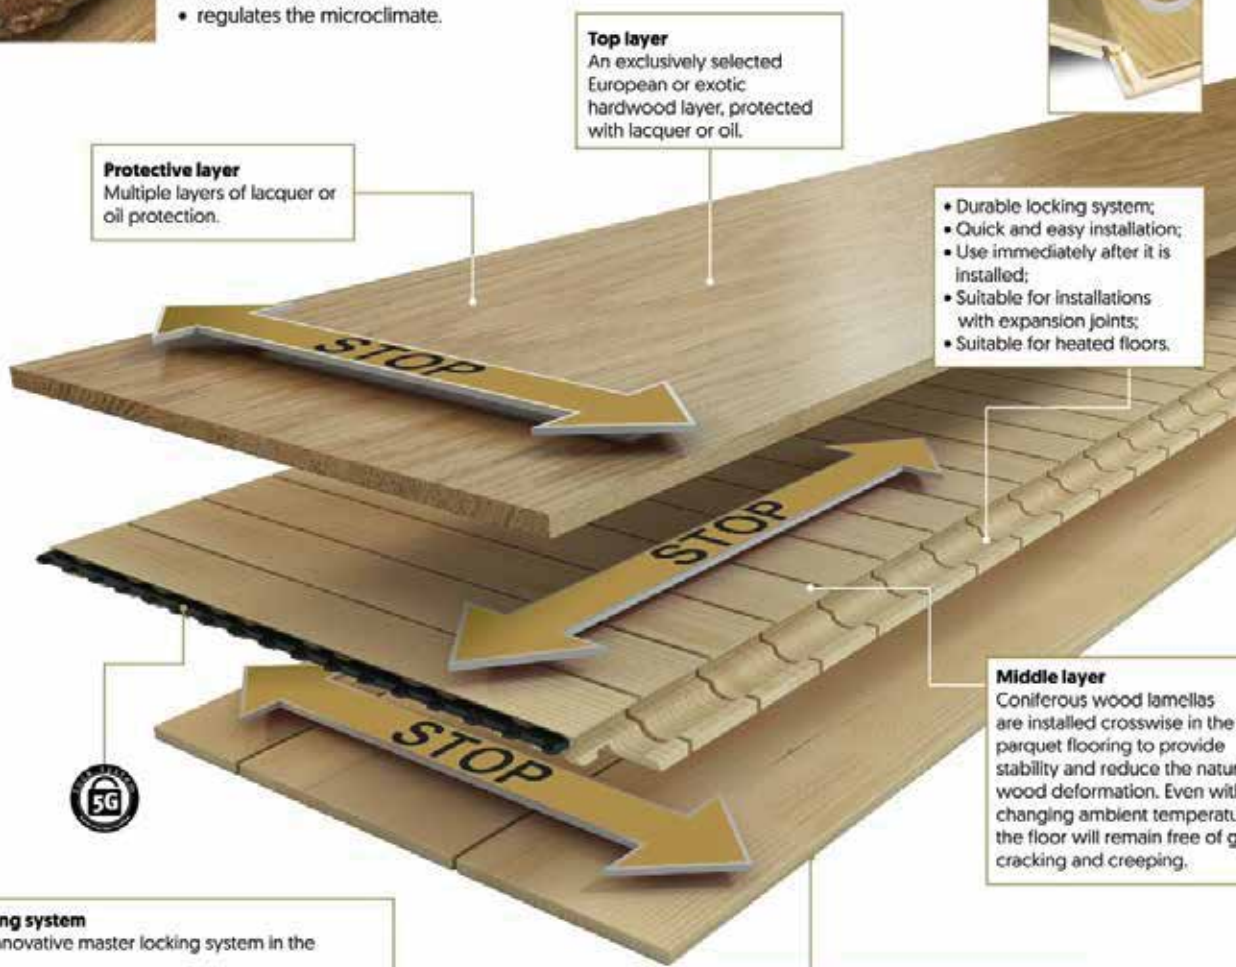

Top layer

An exclusively selected European or exotic hardwood layer, protected with lacquer or oil.

Protective layer

Multiple layers of lacquer or oil protection.

- Durable locking system;
- Quick and easy installation;
- Use immediately after it is installed;
- Suitable for installations with expansion joints;
- Suitable for heated floors.

Middle layer

Coniferous wood lamellas are installed crosswise in the parquet flooring to provide stability and reduce the natural wood deformation. Even with changing ambient temperatures, the floor will remain free of gaps, cracking and creeping.

Bottom layer

Coniferous wood is laid transversely to the middle layer, to further reduce the likelihood of wood deformation.

5G locking system

- Most innovative master locking system in the world;
- 4 times faster than normal floor installations;
- Simple system guarantees orderly installation procedures and the minimum risk of damage to the product.
